Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 September 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 25 September 2003 has been entered.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Leviton (4,384,580) in view of Middaugh et al. (5,185,007).

Leviton discloses all aspects of the claimed invention with the exception of a solidifying agent for solidifying liquid waste.

Leviton discloses a multiple continuous type liquid waste disposal apparatus, as shown in figure 1, comprising plural connected canister bottles 61, each canister bottle comprising an outer bottle 62 and an inner bag 64, as shown in figure 5. The outer bottle 62 and inner bag 64 are transparent, as shown in figure 3. The apparatus further comprises a float to indicate the level of liquid, as described in column 4, lines 18-21.

Art Unit: 3761

Since the float rises once the level of liquid reaches the float, the float is fully capable of functioning as a level gauge. Each canister bottle 61 has an absorption port 77, a discharge port 78, and an exhaust port 70 for creating negative pressure. A stand, shown in figure 5, but not numbered, holds the canister bottles 61 in a straight line. The discharge port 78b of one canister bottle 61b is connected in series to the absorption port 77a of the next canister bottle 61a, and the discharge port of the last canister bottle 61 is closed, as shown in figure 5.

Middaugh discloses a liquid waste disposal apparatus comprising canister bottles, as shown in figure 1. The canister bottle comprises a solidifying agent that absorbs water and therefore solidifies liquid waste in the bottle, as disclosed in column 3, lines 65-68. The solidifying agent blocks liquid waste from flowing into the exhaust port, as disclosed in column 4, lines 2-5.

It would therefore be obvious to one of ordinary skill in the art at the time of invention to construct the canister bottle of Leviton with a solidifying agent, as taught by Middaugh, in order to prevent liquid waste from flowing into the exhaust port.

Allowable Subject Matter

Claims 1, 6, 7, and 12 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 13 and 14 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion
